Summary

Data analyst and Deakin Master of Data Science graduate with a Distinction average. Built Python pipelines for sensor analysis and crowd-density visualisation at Redback Operations. Recent personal projects include bill tracking and public transport apps.

Skills

Analysis: Python, SQL, R, pandas, NumPy, data cleaning, ETL, exploratory data analysis (EDA)
Business intelligence: Power BI, Tableau, Excel, data visualisation
Modelling: scikit-learn, statistical analysis, feature engineering, regression, classification, model evaluation
Tools: Git, GitHub, PostgreSQL, REST APIs, technical documentation

Work Experience

Data Analyst Intern | Redback Operations

Jun 2025 - Jun 2026

- Built reproducible Python pipelines to clean EMG and knee-angle data, detect repetitions and extract features across four muscle channels.
- Compared machine-learning baselines and selected a Random Forest, with mean test-set R-squared of 0.948 on the prepared dataset.
- Developed a crowd-density heatmap service with input validation, normalisation and PNG output, delivered across four sprints.

Product Designer | FreshOn.in

Feb 2023 - Jul 2023

- Designed app concepts, campaign materials, packaging and retail labels in Kannada and English using Figma, Illustrator and Photoshop.

Selected Projects

Paidly | Bill tracking and splitting | 2026

- Built recurring payment tracking and equal or custom bill splits using TypeScript, React Native and PostgreSQL. Added row-level security and revision checks for shared records.
- Covered split calculations with automated tests and uploaded an iOS build for internal TestFlight testing.

Monday Transit | Public transport app | 2026

- Integrated PTV API departures and offline Victoria maps in a Swift app for Mac and iPhone. Kept reported vehicle positions separate from timetable estimates.

Education

Master of Data Science | Deakin University, Melbourne

Jul 2024 - Jun 2026 | Distinction average

Bachelor of Business Management | Bangalore University

2019 - 2022
