PROFESSIONAL SUMMARY

Master of Data Science graduate (Deakin University, Distinction average) specialising in machine learning, statistical modelling, and end-to-end data pipelines. Fluent in Python (pandas, scikit-learn, PyTorch), SQL, and R, with BI delivery in Power BI and Tableau. Proven ability to turn raw sensor and operational data into validated models and decision-ready insight, backed by a builder's instinct from shipping real software products. Available immediately.

TECHNICAL SKILLS

Languages & ML: Python, R, SQL, scikit-learn, PyTorch, pandas, NumPy
Data & BI: Power BI, Tableau, Excel (advanced), ETL workflows, data cleaning & feature engineering
Methods: Regression, classification, CNNs, deep-learning regularisation, Bayesian inference, MCMC, model evaluation
Engineering: Git & GitHub, TypeScript, Node.js, PostgreSQL, REST APIs, cloud/Kubernetes fundamentals

EXPERIENCE

Data Analyst Intern — Redback Operations *Jun 2025 – Jun 2026*

- Built reproducible Python pipelines to clean, validate, and analyse high-frequency EMG and goniometer sensor data, cutting manual preparation effort and improving experiment reproducibility.
- Engineered features and trained/evaluated machine-learning baselines to convert raw biomechanical signals into interpretable, coach-facing performance metrics.
- Documented data pipelines, model assumptions, and evaluation results in Git to support reproducibility, KPI reporting, and team handover.

Product Designer — FreshOn.in *Feb 2023 – Jul 2023*

- Ran data-informed landing-page and campaign experiments, iterating on above-the-fold messaging and tracking performance to guide creative decisions.

PROJECTS

monday — Local-First AI Productivity Assistant *Swift · SwiftUI · Local LLMs · Automation*

- Designed a modular tool-calling architecture with local AI routing and voice interaction, serving a 7B model locally for private, low-latency inference.
- Diagnosed and patched a chat-template bug that dropped tool calls, restoring reliable structured outputs.

Graduate Machine-Learning Projects *PyTorch · scikit-learn · R*

- Implemented deep-learning regularisation experiments in PyTorch on the Breast Cancer Wisconsin dataset, including ELBO derivation and evaluation.
- Built a CNN image-classification model on the RealWaste dataset and reproduced a published hidden-dimension extraction attack.
- Developed Bayesian models in R covering EDA, MCMC sampling, clustering, and a spatio-temporal analysis report.

Cipher — Invite-Only Secure Messaging Platform *Kotlin · Node.js · TypeScript · PostgreSQL*

- Built a private messaging MVP with invite-only onboarding, JWT authentication, and encrypted message relay across a native Android client and Express/Prisma backend.

EDUCATION

Deakin University, Melbourne — Master of Data Science *Jul 2024 – Jun 2026*

Distinction average. Focus: machine learning, deep learning, Bayesian methods, database systems, cloud technologies, and business intelligence.

Bangalore University — Bachelor of Business Management *2019 – 2022*
